

easyTone

Tailored to the Way You Screen

Tablet Audiometry with Pass and Refer Results

Quick Pass/Refer – Everybody Can Screen

Speed up your workflow with our new easyTone audiometer headphone. Its intuitive tablet interface and trouble-free handling enables hearing screening significantly faster than with conventional audiometers. easyTone shows clear pass / refer results that do not need any further interpretation.

Protocol Customization – Screen Your Way

Creating protocols tailored to your individual screening needs and test guidelines has never been easier. The quick and simple protocol setup wizard guides you through all selections to be certain in screening choices. Creating a personalized screening protocol for improved accuracy and consistency.

Guided Screening Workflow

The easyTone has been designed to save your time by providing a guided screening workflow. The device is operated by only two buttons: "present tone" and "save result". Everything else – like switching test frequencies and ears – works automatically.

Digitized Data Management

Frustrated by stacks of paper and hours of post-processing? easyTone minimizes the need for printed lists and for manually transferring results. Just export results as a pdf or send as an e-mail attachment. With the added Win / macOS desktop Companion software you can easily exchange screening lists and results between your computer and easyTone. This saves time, resources and is cost-efficient.

Pure Tone Audiometry for Advanced Testing

The easyTone offers two screening methods to meet the needs of your screening program. One method employs a rapid sweep screening method. The second method allows threshold determination when a precise hearing level is required.

Innovative Audiometer Headphone

The power of a state of the art audiometer in a convenient headphone. The unique design incorporates an IEC / ANSI Type 4 audiometer with calibration housed within the proven sound attenuating circumaural headphone. A built-in noise monitor ensures ambient noise compliance requirements.

Features at a Glance

- State of the art tablet audiometer
- Audiometer built-in easyTone headphone
- Overall pass / refer result
- Easy transition from screening to threshold determination
- Guided workflow preventing operator errors and saving time
- Protocol wizard for easy set up
- Circumaural headphone with high attenuation
- Room noise monitoring
- Direct printout of results or share to e-mail
- Companion software for screening list management

Technical Data

EASYTONE SPECIFICATIONS
